MCG'S VERSIFY WORKFORCE

Versify Workforce is designed to advance and streamline the construction and maintenance process. Workforce's safety management tools including Permit to Work (PTW) are available on mobile devices and desktops, reducing the administrative burden on staff and enhancing compliance and communications. Standardized forms and checklists simplify the process of meeting OSHA and HSE safety standards and best practices, and are easy to adjust when requirements change. Key safety procedures such as Permits To Work (PTW), Job Hazard Analysis (JHA), Job Safety Analysis (JSA), switching orders, isolations, and lockout tagout (LOTO) can be configured by the customer to their specific needs.

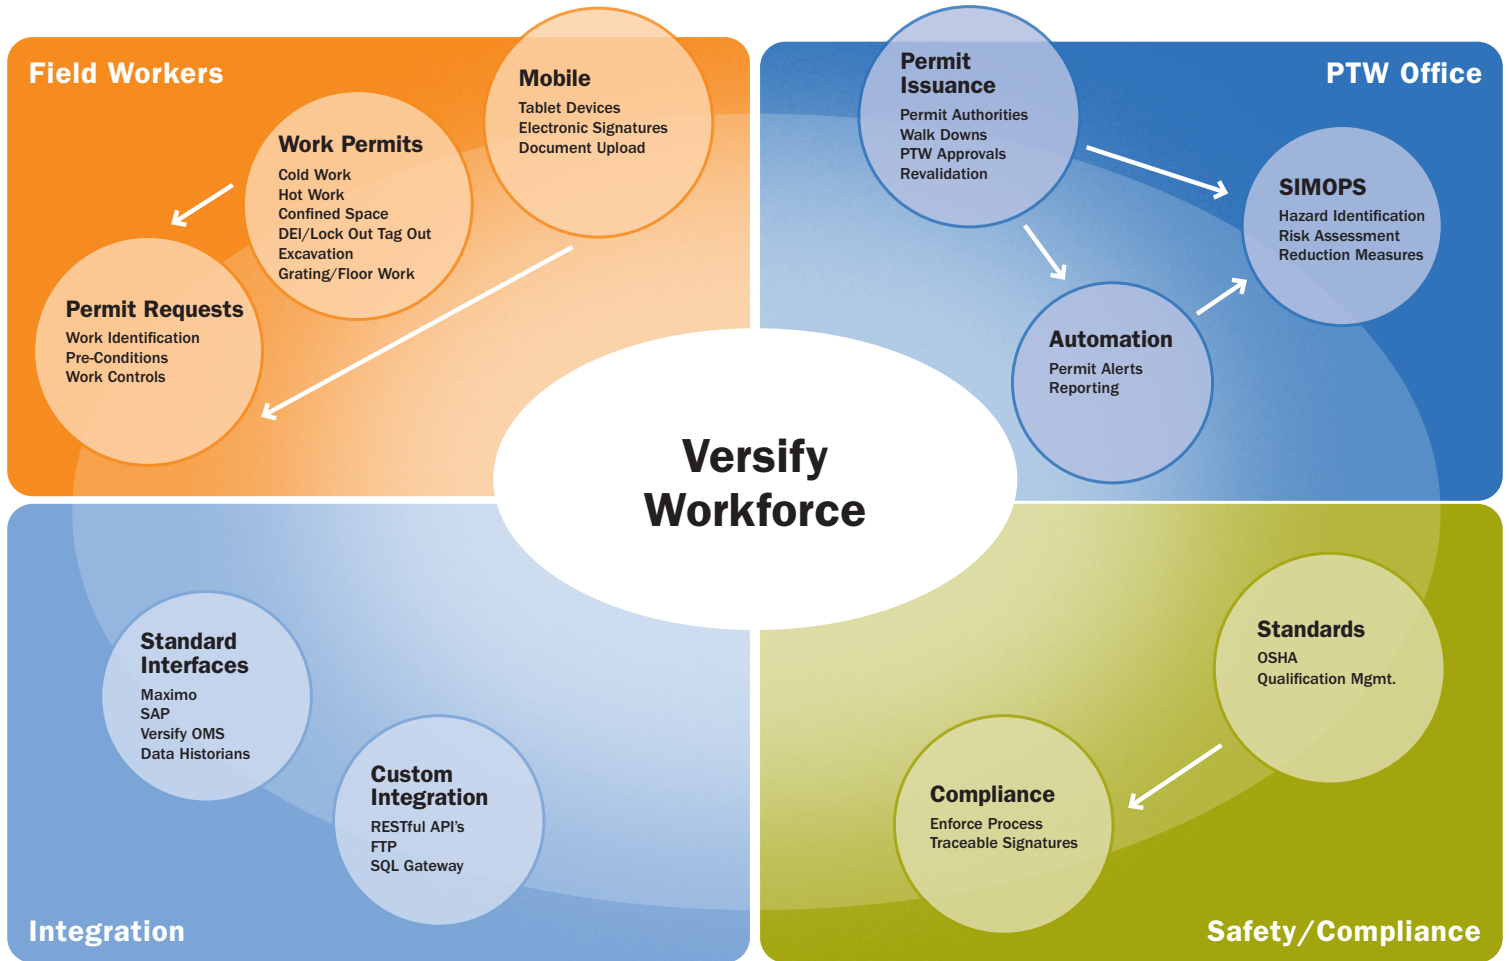

Workforce uses Versify's advanced web-based desktop and mobile platform. By leveraging the Versify digital logbook, workflow engine, and electronic form builder, customers can use Workforce to create their own digital forms and processes and route those forms for review and approval by proper authorities as needed. Electronic forms and instructions are accessible to field technicians and maintenance crews on tablets and smartphones.

A consistent and effective Control of Work (COW) or Integrated Safe System of Work (ISSOW) procedure is critical to meeting OSHA and HSE standards. Workforce's numerous digitized starter templates assist with OSHA, HSE and other compliance and standards, and can be adjusted to meet your organization's particular needs.
